Note: all test results are measured in accordance with
ANSI / NEMA FL 1-2009 standard

OPERATION INSTRUCTION

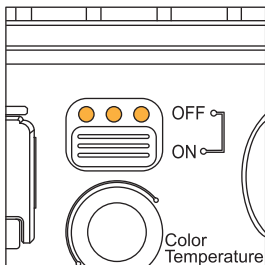

Power on

Power off

Toggle Switch:

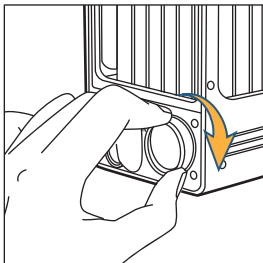

Toggle the switch down to turn on the lantern, and each of the brightness is maintained at 10% of the total brightness, and the color temperature is maintained at 3500K.

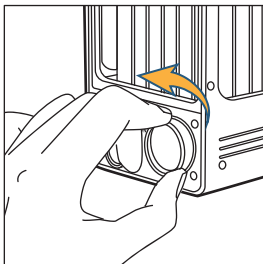

-  Three power indicator light ($\geq 70\%$)
-  Two power indicator light ($20\% \sim 70\%$)
-  One power indicator lights ($\leq 20\%$)

Power Indicator:

Toggle the switch down to turn on the lantern, then the power indicators light. The number of lights will indicate the remaining battery capacity (Three lights indicate the power is $\geq 70\%$. Two lights indicate the power is between $20\% \sim 70\%$. One light indicates the power is $\leq 20\%$); Toggle the switch up to turn off the lantern, the power Indicator will be off.

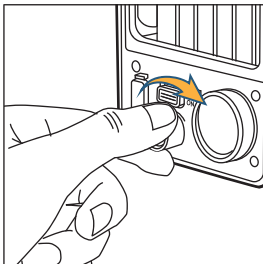

Turn up the brightness steplessly

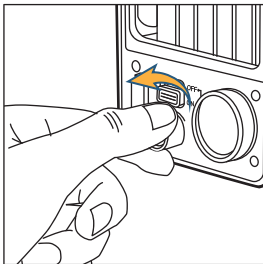

Turn down the brightness steplessly

Stepless Dimmer:

When the lantern is on, rotate the knob clockwise to turn up the brightness; Rotate the knob counterclockwise to turn down the brightness;

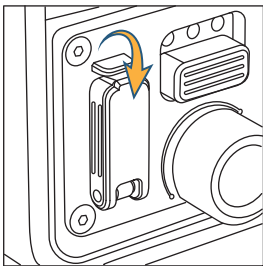

Adjust the lantern to cold color temperature steplessly

Adjust the lantern to warm color temperature steplessly

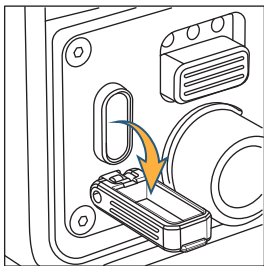

Stepless Color Temperature Adjustment:

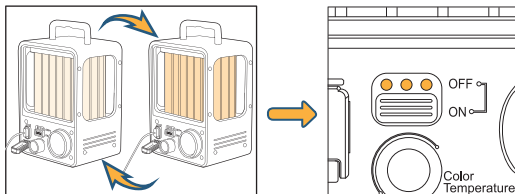

When the lantern is on, rotate the knob clockwise to adjust the lantern to the cold color temperature, and rotate the knob counterclockwise to adjust the lantern to the warm color temperature. The color temperature range is between 3500k-4500k.

Charging:

Open the water-resistant cover, then connect it to the power supply to charge by the type-c cable. After charging, tighten the waterproof cover of the charging interface to prevent unpredictable faults caused by water entering the charging interface.

Charging indication:

When the lantern is off, connect it to the power supply by the type-c cable, the "breathing" effect of the glimmer in the lampshade indicates the device is in the state of charging. The power Indicators can show the battery level clearly. After the device is fully charged, the "breathing" effect will stop and indicate the device is fully charged. When the lantern is on, connect it to the power supply by the type-c cable, The power Indicators can show the battery level and there is no "breathing" effect of the glimmer in the lampshade.
